## PAST PERFORMANCE

**Washington, D.C.** – the U.S. capital issued an emergency when they stopped receiving 911 calls for its 700,000 residents. Our leadership was part of the coordinated efforts between Verizon, Syniverse, and Washington D.C. at a project management level to identify what was causing the issue. The collective efforts over 24 hours of everyone from engineers to senior executives was needed to restore receiving 911 calls to D.C.

**U.S. Army** – needed over \$1M worth of Cisco networking equipment sourced that needed to be tagged to mil spec and cataloged in DoD online database on behalf of TKC Global out of VA. Once the PO was received, our leadership coordinated between US Army, TKC Global, Tech Data, and Cisco to fulfill the hardware and services needed by Army. Logistically this required moving the product between multiple stopping points for all mentioned parties so different work could be performed before reaching the product’s final destination.

**Catholic Relief Services (CRS)** – is a humanitarian aid organization helping people in over 100 Countries by responding to major emergencies, disasters and fighting disease. Our leadership worked directly with DSR Inc. out of Maryland to assist in yearly network refreshes, upgrades, and keeping CRS’ technology standardizations current based on engineer recommendations.
